Investment statistics (since 1 January 2009)

Current month return:	-0.7%
Cumulative return:	74.3%
Annualised return:	11.2%
Annualised volatility:	9.7%

Regional allocation

Asset allocation

Currency allocation

Sources: Momentum Global Investment Management, JP Morgan Bank (Luxembourg) S.A., Bloomberg.

¹ The peer group median is a composite of (i) global peers and (ii) local peers, in the ratio 1:2. The return of the global peer group each month receives a weight of one-third, and this is added to the return of the local peer group which receives a weight of two-thirds; together these two numbers produce a single composite peer group return. This weighting methodology is consistent with the "normal" asset allocation of the Fund, with a two-thirds bias towards "home" country assets and currencies.

■ Manager commentary

March was undoubtedly an interesting month for news flow, much of which centred on the emerging markets. For example, the market result occurred against the backdrop of escalating tension in Ukraine and concerns over the risk of corporate defaults in China. In March the markets took a circuitous route to end the month essentially flat; with a return of 0.1% in US dollar terms for the MSCI World. Year to date global equities are up 1.3%, led by the US and Continental Europe. In March, global emerging market equity enjoyed a much stronger month than has been the case of late and the region's return of 3.1% in US dollar terms was almost sufficient to drag the year to date returns out of negative territory. The bond markets provided more muted returns in March, but year to date the majority of high quality government bonds are in positive territory. For example, the JP Morgan Global Government Bond Index returned -0.1% in March, but remains up 2.5% year to date. The March performance of hard currency denominated emerging market debt is notable at 1.4%. Meanwhile the asset class has added 3.5% in US dollar terms year to date. Following a difficult 2013, year to date global property securities have returned 7.3%.

Against this backdrop the Harmony US Dollar Growth Fund returned -0.7% last month. Asset allocation had a mixed impact on the portfolio. While the Fund is neutral to local and global equity, the small overweight to global emerging markets equity contributed positively to relative and absolute performance as these markets outperformed the broader markets. Within the fixed income selection of the Fund, the underweight to global bonds helped marginally as these assets lost a modest amount of value over the month. The Fund's allocation to convertible debt detracted from performance as these markets generated negative total returns for the month. The Fund is overweight cash which did not have a significant impact on relative performance given the modest price moves in both equity and sovereign bond markets. The Fund's allocation to property aided absolute returns as these assets outperformed the broader equity markets. The Fund underperformed as a number of our manager selections underperformed in the month.

The Artisan Global Value fund, which is managed by Dan O'Keefe and David Samra from San Francisco, performed well in March and over the first quarter with returns of 0.6% and 1.4% in US dollar terms, representing outperformance versus their MSCI World benchmark. Over twelve months the strategy has returned an impressive 22.4%, compared to 19.1% for the benchmark. A key driver of outperformance over the quarter was stock selection within the information technology sector as holdings in Oracle, Microsoft, TE Connectivity and Applied Materials provided high single digit returns or more. This positive attribution was offset by stock selection amongst financials though, particularly among bank holdings in RBS and Lloyds and also insurance holdings which include Chubb and Progressive Corp. The managers continue to find it difficult to find new, high quality investment ideas that are available at attractive valuations and as a result cash levels within the portfolio remain elevated. The portfolio's allocation to emerging markets remains very low, although it increased marginally to 3% over the quarter with the purchase of Samsung. Otherwise their view is that the high quality emerging market businesses they would like to own remain too expensive while those that are available at more attractive valuations are of too low quality.

Looking forward, we expect modest but positive economic growth in the developed world, and we anticipate that the pace of growth in emerging markets, which has been the subject of negative speculation of late, will be supported and will continue to outstrip the developed world even if it has slowed in recent years. Furthermore, equity valuations remain moderate and in select pockets we are still able to identify significant value. Despite the recent geopolitical uncertainty, the markets have proven to be reasonably supported both by accommodative monetary policy and continued investor interest. We believe that government debt remains expensive, and whilst credit spreads continue to tighten there are still potentially attractive risk adjusted return opportunities in those markets. The ongoing concerns relating to both geopolitics and the path of global growth serve as a salutary reminder of the merits of diversification in a portfolio of this sort. As active investors we must also remain alert to the opportunities provided to us by short term market volatility as it provides valuation opportunities for disciplined investors.
