

Harmony Asian Growth Fund

Fund details

Investment manager: Momentum Global Investment Management	ISIN A Class: LU0651983982	Price per share A Class: USD 1.0937
Currency: USD	ISIN B Class: LU0651984014	Price per share B Class: USD 1.1319
Inception date (fund): 12 August 2011	ISIN C Class: LU0651984105	Price per share C Class: USD 1.1971
Structure: SICAV - Part 1 Luxembourg 2002 Law (UCITS)	ISIN D Class: LU0651984287	Price per share D Class: USD 1.1530
Minimum investment Share Class A: USD 100,000; Classes B, C & D: USD 7,500	Subscriptions / redemptions: daily	
Peer group: Bloomberg Active Index for Funds - Global Balanced Offshore Funds	Investment timeframe: 5 years +	

Investment objective

The portfolio will be biased to investments in markets of developed Asian and emerging Asian countries, but could also hold investments outside these countries. The portfolio aims to provide capital growth but with a reduced level of volatility, via strategic exposures to a wide range of asset classes.

Please refer to the Prospectus for full details of the fund, its charges, the investment objective and investment policy.

Fund performance¹

¹As a result of its bias to Asia, the fund will tend to perform well versus peers when Asian securities and currencies outperform. The opposite will also be true when Asian securities underperform other regions. Performance relates to Share Class A.

■ Manager commentary

Markets in October were dominated by events in the US. In the first half of the month the focus was entirely on the political impasse on the Federal budget negotiations; the gulf between Republican and Democrat politicians leading to a failure to agree on a budget deal for the new fiscal year starting on October 1 and a resultant shutdown of non essential Government functions. The US debt ceiling then needed to be raised by midmonth to prevent it being breached, which could have caused a technical default by the Government. While only a very small risk, markets were worried about the negotiations because of the increasingly extreme and intransigent views and the resultant dysfunctional state of US politics, as well as the massive impact globally that an event of this magnitude would have. In the event the politicians agreed on a last minute deal, enabling the government to reopen for business on October 17 although it was only a short term compromise, with the Government funded until January 15 and the debt ceiling raised until February 7 2014.

After sharp falls early in the month, the market became more confident that a deal would be struck and rallied strongly from the second week. Investors concluded that the negative impact to GDP growth as a result of the 17 day Government shutdown, together with the potential hit to business and consumer confidence, would delay the Fed's tapering decision. Many investors also concluded that the Fed would not risk tapering ahead of the next round of budget and debt ceiling negotiations which will conclude only in early February, so no tapering until March has almost become the market consensus. This view was strengthened with Obama's nomination of Janet Yellen as the next Fed Chair, to succeed Bernanke in January 2014. While widely expected, the appointment confirms a continuation of a dovish approach in the Fed to monetary policy, with Yellen the most dovish of the likely candidates for the position.

The Harmony Asian Growth Fund returned 2.5% in October. Over the past twelve months the Fund has returned 10.4% net of all fees. The global aggregate bond market returned 1.0% in October, while global stocks returned 3.9% in US dollar terms. The Fund's asset allocation policy had mixed results last month, with our decision to avoid government bonds in favour of various aspects of the credit markets benefitting performance as these assets in aggregate outperformed sovereign paper. However, the Fund is overweight cash, and in a month where government bonds increase in value an overweight cash holding negatively impacts relative performance. The Fund is neutral to global equity and while this aided absolute performance it did not provide return enhancement. Finally the Fund is underweight to global property securities which enjoyed a strong month, but this underweight was mitigated by the exposure to global listed infrastructure.

Going forward, with uncertainty remaining over the solidity and pace of developed world economic growth, combined with the potential for tightening credit conditions, investors should look to retain a prudent level of diversification in their portfolios. While political issues in the US and Europe have fallen from the headlines for now, there remain significant risks – especially in the latter region – that remain unresolved. Overall, we believe that the Fund is well positioned to take advantage of future opportunities in the markets as they present themselves.

From a manager selection perspective, the Prusik Asian Income Fund, which was added towards the end of last year, gained 4.1% in US dollar terms during October, compared to 4.7% for Asian equities. Year to date the fund has returned 13.2% compared to 5.8% for the benchmark. The manager's focus on dividend paying stocks results in a current projected dividend yield for the portfolio of approximately 4.5%. Although the perception is that income orientated strategies have been impacted by rising bond yields recently, this fund has actually outperformed the market since the US 10 year bond yield bottomed on 30th April. This is partly because the manager acted to remove a lot of the interest rate sensitivity in the portfolio during the first half of the year, but it is also because stock valuations are not always as dependent on interest rates as one might expect. There was a reasonable amount of portfolio activity in the third quarter; the manager exited a total of 12 positions which had either met their valuation target or no longer met their required return or quality objectives. The manager is currently finding less value in the "traditional" high yield equity universe as a result of the market favouring those stocks with a safe, short term dividend yield whilst neglecting other valuation methods or the long term sustainability of the dividend. As a result, new positions being added to the portfolio offer higher growth, higher quality and higher profitability than those they replaced, at the expense of a lower short term dividend yield but in the long term interests of increasing the potential total return for the portfolio.
